Welcome to **GRAZERS...**

The effective, easy solution to damage caused by grazing rabbits, pigeons, deer & geese... Also used against mouse & vole damage to seedlings plus squirrel damage to young fruit.

It's estimated that over £100 million pounds are lost each year by farmers because of damage to crops from rabbits alone. On the back of its successful use by farmers Grazers is available at many garden centres and mail order garden shops in convenient garden size bottles.

Rose bed before and 4 weeks after treatment (roses and strip of grass round the bed were sprayed once with the basic application rate).

Rabbits were present throughout the trial but avoided the sprayed area once treated.

Grazers is NOT a pesticide and is therefore safe to pets, wildlife and the environment.

- Rabbits
 - Pigeons
 - Deer
 - Geese
- and also..
Mice & Voles

Application rate: 4 capfuls (80ml) in 5 litres water (3 teaspoons per litre).

Apply using a conventional hand sprayer or knapsack sprayer with a fine nozzle (NOT a watering can). Spray just to wet the leaf. In areas of high infestations it is safe to double the application rate.

The recommended spray interval is 4 weeks, however this can be modified e.g. in situations where treated grass is mown, plants are watered or periods of prolonged heavy rainfall follows spraying, repeat applications may be needed sooner.

NEW PLANTS ARE ESPECIALLY VULNERABLE TO DAMAGE.

Spray at least twice prior to planting (allow leaf to dry between sprays). Spray again once planted. Avoid spraying in bright sunlight.

"I cannot tell you how grateful I am that such a product is available and it is effective against deer damage - we shall have blooms for the first time this year thanks to Grazers." **Umbria, Italy**

"We have used Grazers on our roses successfully and are happy to recommend it." **Richard Beale, Peter Beales Roses**
