## EFFECTIVE AGAINST DAMAGE EXPECTED FROM SLUGS & SNAILS

### Application Directions

- Shake; twist nozzle; squeeze trigger.
  - Apply every 7 - 10 days\* to susceptible plants, before slugs and snails arrive
  - Apply a light covering to both sides of dry leaf, up to run off and not in direct sunlight or in freezing temperatures.
  - Safe to spray from early growth stage
  - Prior to using left-over product, shake well again before application
- \*Advised (& safe) to spray more frequently if there are high slug or snail numbers, prolonged rainfall or overhead watering, or if plants are rapidly putting on new growth.

**RECOMMENDATIONS:** Spray twice, or more, 24-48 hours before any transplanting, as plants most prone to attack from slugs and snails at this time. Avoid application for at least 4-5 days after transplanting or transferring from greenhouse. Allow foliage to dry before applying other sprays. **Standard harvest interval advice:** Leave 1 week after last application.

**GRAZERS products also strengthen and stimulate your plants for robust growth.** No harm is done to the pests, so this encourages natural predators back into the garden, e.g. songbirds and ladybirds, amongst others.

**CONTENTS:** Grazers contains a specific calcium solution, with plant extracts and adjuvants in a ready to use solution with water. Can keep for 2 years when stored in cool, dark conditions.

**Grazers products do not contain any animal by-products.**
